

Practice Management and Business Consulting Services

Management & Practice Assessment

Our consultants assist practices in a variety of ways, from extending your practice management resources as new initiatives and challenges emerge, to assessing your practice from many angles to pinpoint where processes can be improved and trouble spots remediated.

- **Process Evaluation and Improvement**

Our consultants will evaluate your processes, make suggestions for improvement, and help you implement needed changes. Increasing your efficiency increases productivity and allows for better patient interactions, accurate and timely billing, and smoother work flow across your practice.

- **Physical Set-up: Patient and Staff Flow**

Waiting room always jammed? Physicians constantly running behind schedule? Phones ringing off the hook? You don't need to move to a new office in order get better 'flow'. Nor do you need to perform extensive renovations. Sometimes simple and inexpensive reconfigurations can greatly improve patient flow-through and ease physician and employee stress. We can help determine where the primary pain spots exist and focus on easy-to-implement solutions.

- **Revenue Cycle Management**

Think your cash flow is doing just fine? It may be but there is always room for improvement. We assess the processes in place from the time an appointment is scheduled through what happens when a claim is denied. Using Payer's free technologies, such as real-time adjudication, benefit management data, and denial management tracking tools, our methods ensure tight end-to-end revenue processes.
