

## Research, Analytics, and Education

You need the right information and resources for your practice. You may have both, but knowing what to do with it is essential to the success of your practice. The Verden Group gives you the knowledge and understanding you need to make the best decisions for your patients.

- **New and Alternative Service Offerings**

Are you considering adding a new service? Unsure on how to determine what your return on investment will be? We help determine that ROI. Through Payer policy analyses, market research and community health statistics, Verden Consultants consider all of these factors and provide you with a thorough analysis pointing to the best financial decision for your practice or facility.

- **Patient Education & Disease Management Programs**

Individual patients have individual needs. Identifying which patients require more than the usual care is vital for practices looking to manage patients more effectively. We create innovative systems by combining technologies and care management processes. Designed to be easily implemented these programs assist in improving patient care and reducing office workload.

- **Patient Recall**

Effective patient recall systems help you to balance workload while ensuring efficacy of care. Many P4P programs pay out as a result of timely care to patients. Having systems in place to track and recall patients based on conditions and care required is essential. Verden can help you make sure that no patient is overlooked.
